Research Log

${\it JeffGWood@mavs.uta.edu}$

$\mathrm{May}\ 23,\ 2016$

March 30, 2016	Established research log after 3 hours of learning new IATEX
April 2, 2016	Added some additional comments to the Process
April 3, 2016	Have been reading [ImageBasedRendering] [1].
April 11, 2016	Reviewing blog articles located at: • https://erget.wordpress.com/2014/02/01/ calibrating-a-stereo-camera-with-opencv/ • https://erget.wordpress.com/2014/02/28/ calibrating-a-stereo-pair-with-python/ • https://erget.wordpress.com/2014/03/13/ building-an-interactive-gui-with-opencv/ • https://erget.wordpress.com/2014/04/27/ producing-3d-point-clouds-with-a-stereo-camera-in-opencv/ for process to get webcam up and running. Previous issues related to fine-tuning block matching parameters. Need to review sources at list at bottom of http://docs.opencv.org/2.4/modules/calib3d/doc/camera_calibration_and_3d_reconstruction.html to understand.
April 19, 2016	Made adjustments to python for image acquisition scripts (from blogs mentioned on April 11, 2016.)
	NOTE: Consider creating rig with glue to keep stereo camera placement / direction constant.
April 19, 2016	UPDATE: Error with calibrate_cameras python code causing linux machine to crash. If can't be resolved switch over to MacBook.
	NOTE: Package should be setup by calling \$ python setup.py install
April 19, 2016	UPDATE: Crash due to recursive shell call and was fixed. OpenCV not detecting all chessboard corners. Will try a new board.
April 20, 2016	Did small amount of work on Change of Reference section in the paper. Added a section to the intro containing a map of commonly used symbols and notation

April 29, 2016

Read following sections of [Chen93] [2]:

- Abstract
- Introduction
- Visibility Morphing

SUMMARY: Explicit Geometry is ignored (i.e. surface mesh and 3d-points). Geometry is kept in 2-d. Whereas Image Morphing interpolates between *pixel intensity values in fixed locations* the method in this article interpolates between *pixel locations with (relatively) fixed intensity values.* **Question:** Sections read mention that pixel positions are stored in 3d (3-tuple) data structure. I'm not sure I understand this correctly, since

- 1. This would effectively make this structure a point cloud (but no mention of it in the paper).
- 2. There is no mention of special "depth-based" hardware or cameras (Far as I know this is upposed to be a regular image).

April 30, 2016

Checked understanding of *epipolar constraint* through reading of [Hartley2004] [3] and its derivation of

$$\mathbf{x}^{T} \cdot \mathbf{E} \cdot \mathbf{x} = \mathbf{x}^{T} \cdot [\mathbf{t}]_{\times} \cdot \mathbf{R} \cdot \mathbf{x}$$

$$= \mathbf{x}^{T} \cdot \mathbf{l}$$

and creation of MatLab code verifying this.

I may have been mistaken about relation of **Fundamental Matrix** and **Essential Matrix**.

My current understanding is the *Fundamental Matrix* describes point/epipolar line correspondence for images under **scale invariant** conditions (i.e. point correspondence and Fundamental matrix does not change when one image (or both images) are scaled (uniformly or omni-directionally).

Essential Matrix describes point/epipolar line correspondance for images under **normalized** conditions (i.e. unit-length is set equal to focal-length, and projection center is set at (0,0,1).

May 2, 2016

Additional wording to Stereo-vision section. I am unsure of best order to present ideas related to multi-view geometry.

May 18, 2016

Reviewed [Chen93] [2] Section 2. Consider reviewing follow relevant articles:

- Disparity [Gosh89]
- Optical Flow [Nage86]
- Look-up tables [Wolb89]
- 3d scenes [Pogg91]

Working on MatLab code to pick correspondig points in stereo-images, and calculate pixel offset vectors.

May 19, 2016

Read Section 2.3 of [Chen93] [2]. View interpolation is limited by:

- Penumbra: pixels visible in one source image but not both
- $\bullet~$ Umbra, pixels visible in neither source image, and invisible in destination image.
- **Holes**, pixels visible in neither source image, but *visible* in destination image.

Calculatred formula for pre-displaced quad-pixel calculation using a bi-linear interpolation as:

$$\mathbf{P}(u,v) = \mathbf{P}(0,0) \cdot (1-u) \cdot (1-v) + \mathbf{P}(1,0) \cdot u \cdot (1-v) + \mathbf{P}(0,1) \cdot (1-u) \cdot v + \mathbf{P}(1,1) \cdot u \cdot v$$

May 20, 2016

Derived formula for uv calculation using geometry matrix, blending matrix and basis vectors of $\mathbf{u} = [u \ 1]^T$ and $\mathbf{v} = [v \ 1]^T$

$$x_{uv} = \begin{bmatrix} u & 1 \end{bmatrix} \begin{bmatrix} -1 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} x_{00} & x_{01} \\ x_{10} & x_{11} \end{bmatrix} \begin{bmatrix} -1 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} v \\ 1 \end{bmatrix}$$
$$y_{uv} = \begin{bmatrix} u & 1 \end{bmatrix} \begin{bmatrix} -1 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} y_{00} & y_{01} \\ y_{10} & y_{11} \end{bmatrix} \begin{bmatrix} -1 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} v \\ 1 \end{bmatrix}$$

Question for Kamangar: Is there a way given x and y to solve for u and v?

May 22, 2016

Added more to thesis document.

Worked on singular-value of previous blending equation. where:

$$\begin{bmatrix} x_{uv} & 0 \\ 0 & y_{uv} \end{bmatrix} = \begin{bmatrix} \mathbf{u} & \mathbf{0} \\ \mathbf{0} & \mathbf{u} \end{bmatrix}^T \begin{bmatrix} \mathbf{G} & \mathbf{0} \\ \mathbf{0} & \mathbf{G} \end{bmatrix}^T \begin{bmatrix} \mathbf{X} & \mathbf{0} \\ \mathbf{0} & \mathbf{Y} \end{bmatrix} \begin{bmatrix} \mathbf{G} & \mathbf{0} \\ \mathbf{0} & \mathbf{G} \end{bmatrix} \begin{bmatrix} \mathbf{v} & \mathbf{0} \\ \mathbf{0} & \mathbf{v} \end{bmatrix}$$

where

$$\mathbf{u} = \begin{bmatrix} u \\ 1 \end{bmatrix}, \, \mathbf{v} = \begin{bmatrix} v \\ 1 \end{bmatrix}, \, \mathbf{X} = \begin{bmatrix} x_{00} & x_{01} \\ x_{10} & x_{11} \end{bmatrix}, \, \mathbf{Y} = \begin{bmatrix} y_{00} & y_{01} \\ y_{10} & y_{11} \end{bmatrix}, \, \text{and} \, \mathbf{G} = \begin{bmatrix} -1 & 1 \\ 1 & 0 \end{bmatrix}$$

May 23, 2016

Read [Chen93] [2] section 2.4 on Block Compression.

SUMMARY: Blocks are established established by *threshold* where each block contains pixels that are *offset by no more than the threshold*, allowing all pixels to be offset at once.

Question for Kamangar: Doesn't this assume that all pixels in the block have a uniform offset?

Working on MatLab program to perform pixel offsets of corresponding points (i.e. assign corresponding points to pixels in MatLab by non automatic methods)
